

NCA

NCA is a non chloride additive (in dry powder form) designed to accelerate the set time of concrete and mortar mixes while increasing early compressive strength.

NCA does not promote steel corrosion or efflorescence and will not disturb color dispersion in colored mortar or concrete.

- Non chloride accelerator
- Will not promote steel corrosion or efflorescence in mortar and concrete
- Will not disturb color dispersion in colored mortar or concrete
- Reduces initial & final set times
- High early strength development
- Increases durability
- Non hazardous
- Meets ASTM C-494 Types C & E

| | |
|--------------|---|
| Additive | Add to cement based mixes |
| Packaging | 1 lb bag (12/case) |
| Dosage Rates | <ul style="list-style-type: none"> • One 1 lb bag for each 70 lb bag of masonry cement • Two 1 lb bags for each 94 lb bag of Portland cement. |
| Mixing | Pour powdered contents into wet mortar or concrete mix. Thoroughly mix for 5 minutes to ensure complete dispersion |
